

CSAIL

SUMMARY

▶ **A direct optimization** approach to cross-lingual word alignment

► The Gromov-Wasserstein distance is well-suited for this task: relies on *relational* rather than *positional* similarities across spaces

▶ Not limited to original mapping

▶ **Applies to embeddings of different dimensionality!**

► Optimization objective is **strongly predictive** of translation accuracy

▶ Future work: speed up via GPU and stochastic optimization

SUMMARY

- ▶ A **direct optimization** approach to cross-lingual word alignment
- ▶ The Gromov-Wasserstein distance is well-suited for this task: relies on **relational** rather than **positional** similarities across spaces
 - ▶ Not limited to orthogonal mapping
 - ▶ Applies to embeddings of **different dimensionality** !
- ▶ Optimization objective is **strongly predictive** of translation accuracy
- ▶ Future work: speed up via GPU and stochastic optimization
